Dismantling and Deconstruction

The dismantling of old factories and production sites is becoming more and more of a challenge for entrepreneurs. In addition to the usual capacity bottlenecks, the increasing costs for personnel, hoisting gear and operating aids contribute to the problem.

We have often been confronted with this issue in the past, so that we have decided to also offer comprehensive overall solutions in the area of dismantling.

By selling the used machines, which occur during the dismantling, the costs can be efficiently reduced.

More precisely, we offer you the complete dismantling of all mechanical and electrical components as well as the steel structure of the plant. The demolition of concrete foundations and buildings can also be carried out on our part, including proper disposal.

We dismantle:

- Concrete plants (ready-mixed and pre-cast concrete)
- Processing plants of quarries, sand and gravel pits
- Recycling plants
- And much more

Our experienced team, consisting of mining engineers, technicians and assembly specialists, is at your disposal for your project.

Please feel free to contact us to discuss your project in person.

If you are interested, we would be happy to send you a detailed offer with photo documentation.

Yours sincerely,

EuroConsult Dimitrios Piretzidis
